## Experience

### **Software Developer at Atlassian**

June 2015 - Present

Using a nice combination of go, cassandra, and teamwork to build and scale microservices for HipChat as a platform developer.

### **Teachers Assistant - IT 100 at Minnesota State University, Mankato**

August 2013 - May 2015 (1 year 9 months)

Shared my passion for the industry with brand new students who were just dipping their feet in it. As a TA, it was my job to bridge the gap between Dr. Kruse and the 150+ students that were taking the course that semester.

### **Software Engineering Intern at FPX**

November 2012 - May 2015 (2 years 6 months)

Having many different roles on a variety of projects while working for a company that has under-grown vast changes (management, methodologies, environment, etc.) and huge growth has been an incredible experience. Being thrown on projects, in areas I have no prior knowledge of, with the expectation of delivering was a challenge I learned to crave.

#Worked with other interns to spearhead the proof of concept and eventual implementation of Selenium testing for our UI.

#Developed multiple tools in java to be used by our internal QA and Development teams.

#Created and helped to maintain hundreds of automated and semi-automated JMeter test cases that tested both our RESTful and SOAP Web-services.

#Helped select, interview, on-board, and mentor junior interns through 4 hiring cycles.

### **Independent Programmer for Math Department at Minnesota State University, Mankato**

August 2013 - December 2014 (1 year 4 months)

Wrote scripts and found creative solutions to help the Math department be more effective in tutoring and hosting annual math competitions.

### **Cake PHP Developer at B302**

## January 2014 - July 2014 (6 months)

I spent one semester studying abroad at the HAN University of Applied Science in Arnhem, Netherlands. During this time I also worked as a full-stack PHP Developer for B302, a student run, faculty mentored media company.

In my short time at B302 my primary task was creating a hosted customer resource management application using the Cake PHP framework. I saw this project through from the very beginning where I designed the data model to a working testable beta that the customer was using and giving feedback on.

- # Met regularly with clients to communicate requirements, progress, and required changes.
- # Designed and Implemented a database that fulfilled requirements using MySQL.
- # Used CakePHP, HTML, CSS, Bootstrap, Javascript, and JQuery to develop a CRM Web Application.
- # Learned technologies on the fly based on what was needed for the project.

## Quality Assurance - Tester at Activision

### May 2012 - September 2012 (4 months)

Spent 10 hours a day 6 nights a week working with other passionate gamers to find issues in triple A titles. As a member of the online team we had to work together to set up scenarios and reproduce intricate regressions.

Titles worked on:

- #Tony Hawk's Pro Skater HD
- #Transformers: Fall of Cybertron
- #James Bond: 007 Legends
- #NASCAR The Game: Inside Line

---

## Education

### Minnesota State University, Mankato

Bachelor's Degree, Information Technology - Math Minor, 2011 - 2015

---
